- Participation in 2 big releases
- Participation in development of 3 new functions
- Work in: Jira, TestTrail, Confluence, AndroidStudio(simulator Android and Logcat), analog sniffers, and Bamboo
- Collaborated with Product Managers, data analysts and engineers to plan and implement complex features while also understanding impact areas that need to be considered

About me and my experiences

I worked at startups and big corporations. Experience works, how single QA engineer and in teams. Works with Developers, Designer and PM.

Achivment - building testing process in company. Participated QA in cycle development process, start using TMS and streamline test-documentation.

I think the good QA engineer who not only amund finds bugs, that's how project work in realise. For this I try participation in the development process, work with the team, with documentation and anticipate mistake in the project.

I think my superpower - that mobile testing
I research and write about mobile, apps, testing in my social media, articy for the forum also leading YouTube channel. Follow in the news from mobile and IT world.
Work mentors with minty (who, after course or working QA engineer). Learning capability Figma and create small mobile app designer. Also create a training apparatus for Junior+ QA Engineers.

I do it regularly self-learning. Research technology, knowing better about mobile and learning foreign languages. This all improved my specialist skills.

I have been an actor and athlete. I was speaking in that, competition in several countries. Coucher people who won the competition. Leded fencing organitathion. And under my lead that club reached a new level.
Now I go in of sport and blogging.
